DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-55, drawn to a method of producing a transgenic avian by introducing into an avian cell a nucleic acid comprising a transgene, an integrase activity and a cationic polymer, classified in classes 800 and 800, subclass 19 and 25.
- II. Claims 56-65, drawn a method of dispersing nucleic acid in a cell by introducing into a cell a nucleic acid and a dispersing agent in an amount that will disperse the nucleic acid in a cell, classified in class 424, subclass 93.2.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are directed to related distinct method steps. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, method of group I is directed to make transgenic avian, while method of group II is directed to a dispersing nucleic acid in any cell. It is noted that invention of group II have other utilities and therefore can be used in other processes. For instance, efficient dispersion of nucleic acid can be used in gene therapy and making of other transgenic animal. Thus, method of group I and II involves distinct and different method steps that will not be coextensive in patent and non-patent literature.

A search and examination of more than one invention as defined above would unduly burden the office. Each of the invention requires a different search of the art and concerns separate consideration of patentability. For example, the subject matter of many of the products is not largely co extensive as the inventions are related to distinct method steps. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143). Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
